An Announcement by The Studebaker Corporation of America

Eight months ago, when the costs of material and labor appeared to have reached their peak, we made substantial reductions in the prices of Studebaker cars. These reductions were in anticipation of our ability, after the turn of the year, to purchase materials and to fabricate them at lower costs.

The expected savings have been realized. With them, other savings have been made, as a result of the greatly increased volume which Studebaker has this year enjoyed.

During the first five months of 1921, our volume of business has exceeded that of any other automobile manufacturer except Ford.

The Studebaker plants are running at capacity with unfilled orders on hand for over 7,000 cars.

In this quarter we shall produce 21,000 automobiles against 11,000 in the corresponding period of last year. This is an increase of approximately 100%.

No other automobile manufacturer is making a comparable showing.

We believe that the confidence of the buying public, which has made and is making this record possible, will continue, because it is supported by the quality and value of our products, and these we shall uphold.

We expect that as a consequence the present economical and efficient production basis can be maintained and that we are justified in making further reductions in the prices of Studebaker cars.
